Configuration Overview

The Hardware assignment group is an important part of the Create Catalog Task configuration. The project directs the generated laptop configuration task to the Hardware group.

Key Configuration Steps

- Open the Create Catalog Task action in the Standard laptop task flow.
- Locate the Assignment group field under the task field values.
- Select Hardware as the Assignment group.
- Keep the remaining task settings as configured.
- Complete the action and save the flow.
- The resulting Catalog Task is available for Hardware processing.

ASSIGNMENT GROUP – HARDWARE – DESCRIPTION

Implementation Details

The source project explicitly specifies Hardware as the Assignment group. This configuration ensures that the generated task is routed to the team responsible for the laptop configuration activity, supporting the project's objective of optimising task allocation and reducing manual intervention.

Project Context

This configuration forms part of the Standard Laptop procurement automation workflow. The project connects the Service Catalog request, approval process, Flow Designer automation, Requested Item, and generated Catalog Task to reduce manual intervention and support timely laptop configuration.

Verification

The implementation should be checked in ServiceNow after configuration. The relevant configuration should be visible, the flow should be active where applicable, and the Standard Laptop request should produce the expected Catalog Task values. The final task should reflect the configured values and assignment.

Expected Result

The configuration contributes to a streamlined procurement process in which the Standard Laptop request can progress through approval and automated task creation, with the Hardware team receiving the configuration work.
