ProjectName	**Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer**
Maximum Marks	3 Marks

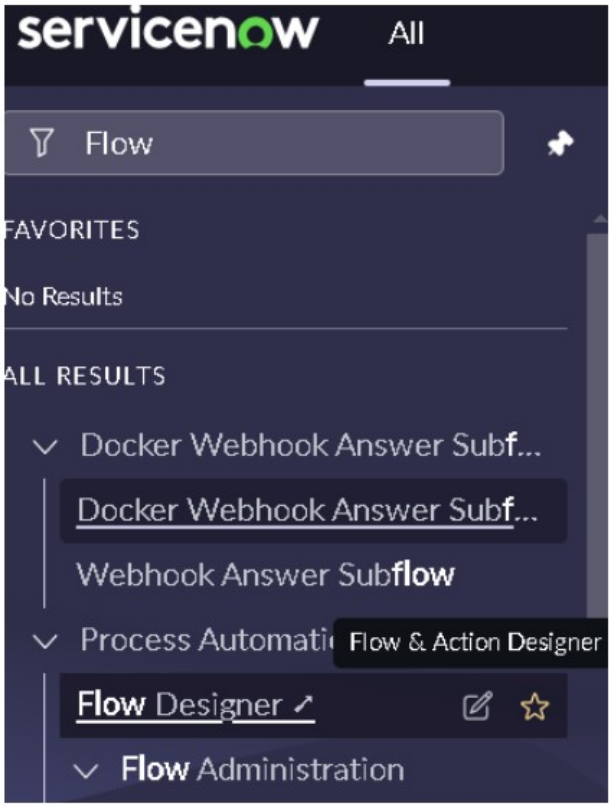

FLOW DESIGNER CONFIGURATION

TASK INITIATION

Milestone 1 : Flow

Activity 1: Create a Flow to Create Catalog task to update the short description after Approval the service Request and it will be Assignment group to Hardware.

1. Open service now.
2. Click on All >> search for Flow Designer
3. Click on Flow Designer under Process Automation.
4. After opening Flow Designer Click on new and select Flow.
5. Under Flow properties Give Flow Name as " Standard laptop task".
6. Application should be Global.
7. Select Run user as " System user " from that choice.
8. Click on Submit.

Configuration Overview

The implementation begins by creating the Flow Designer flow named “Standard laptop task.” The project configures the application as Global and Run As as System User. This flow is the main automation component for the Standard Laptop procurement process.

Key Configuration Steps

- Open ServiceNow and navigate to Flow Designer under Process Automation.
- Create a new Flow and enter the Flow Name as “Standard laptop task.”
- Set Application to Global.
- Set Run As to System User.
- Submit the flow configuration.
- Continue by adding the Service Catalog trigger and the required action.

FLOW DESIGNER CONFIGURATION – DESCRIPTION

Implementation Details

The configuration establishes the basic execution context for the automation. The source project shows the Flow Designer navigation and the Flow properties window containing the Standard Laptop task name, Global application, and System User execution option. These settings prepare the flow to process the Service Catalog request and generate the required configuration task.

Project Context

This configuration forms part of the Standard Laptop procurement automation workflow. The project connects the Service Catalog request, approval process, Flow Designer automation, Requested Item, and generated Catalog Task to reduce manual intervention and support timely laptop configuration.

Verification

The implementation should be checked in ServiceNow after configuration. The relevant configuration should be visible, the flow should be active where applicable, and the Standard Laptop request should produce the expected Catalog Task values. The final task should reflect the configured values and assignment.

Expected Result

The configuration contributes to a streamlined procurement process in which the Standard Laptop request can progress through approval and automated task creation, with the Hardware team receiving the configuration work.
