</table>

 Shows the request approval step that must be completed before the configured task is generated.	 Saves and activates the completed flow so it can execute when trigger conditions are met.	 Assigns the Standard laptop task flow to the Standard Laptop Service Catalog item.	

The Flow Designer configuration implements an automated process for standard laptop procurement in ServiceNow. The workflow begins with the **Standard Laptop Service Catalog** request and uses a **Service Catalog trigger** to start the flow. After the request is approved, the **Create Catalog Task** action generates the required configuration task using the Requested Item record. The task is assigned to the **Hardware** group with the specified task details. Finally, the configured flow is activated and assigned to the Standard Laptop Service Catalog item through the Process Engine, creating a streamlined process that reduces manual intervention and supports timely laptop configuration.
