SERVICE CATALOG TRIGGER

9. Click on Add a trigger
10. Select the trigger in that Search for " Service Catalog " and select that.
11. After that click on Done.

Configuration Overview

The Service Catalog trigger is the entry point for the Standard laptop task flow. It connects the Standard Laptop request to the automation configured in Flow Designer.

Key Configuration Steps

- Open the Standard laptop task flow in Flow Designer.
- Click Add a trigger.
- Search for “Service Catalog” in the trigger list.
- Select the Service Catalog trigger.
- Confirm the trigger and click Done.
- The trigger provides the request context required by the subsequent flow action.

SERVICE CATALOG TRIGGER – DESCRIPTION

Implementation Details

The source project shows the Service Catalog trigger selected within the Standard laptop task flow. Once configured, the trigger allows the workflow to respond to the relevant Service Catalog process and continue toward automatic Catalog Task creation.

Project Context

This configuration forms part of the Standard Laptop procurement automation workflow. The project connects the Service Catalog request, approval process, Flow Designer automation, Requested Item, and generated Catalog Task to reduce manual intervention and support timely laptop configuration.

Verification

The implementation should be checked in ServiceNow after configuration. The relevant configuration should be visible, the flow should be active where applicable, and the Standard Laptop request should produce the expected Catalog Task values. The final task should reflect the configured values and assignment.

Expected Result

The configuration contributes to a streamlined procurement process in which the Standard Laptop request can progress through approval and automated task creation, with the Hardware team receiving the configuration work.
