STANDARD LAPTOP FLOW

TASK INITIATION

Milestone 1 : Flow

Activity 1: Create a Flow to Create Catalog task to update the short description after Approval the service Request and it will be Assignment group to Hardware.

1. Open service now.
2. Click on All >> search for Flow Designer
3. Click on Flow Designer under Process Automation.
4. After opening Flow Designer Click on new and select Flow.
5. Under Flow properties Give Flow Name as " Standard laptop task".
6. Application should be Global.
7. Select Run user as " System user " from that choice.
8. Click on Submit.

Configuration Overview

The Standard laptop task flow represents the main automation path for the project. A Standard Laptop request enters through the Service Catalog, passes through the approval process, and then the flow creates the Catalog Task required for laptop configuration.

Key Configuration Steps

- Standard Laptop is selected from the Service Catalog.
- The request is submitted and processed for approval.
- After the required approval condition is reached, Flow Designer executes.
- The flow uses the Requested Item record for task generation.
- A Catalog Task is created for the laptop configuration activity.
- The generated task is routed to the Hardware group.

STANDARD LAPTOP FLOW – DESCRIPTION

Implementation Details

The source document describes this as the core procurement automation sequence. The Flow Designer configuration connects the request and approval process to task creation, reducing manual intervention and supporting timely configuration of standard laptops.

Project Context

This configuration forms part of the Standard Laptop procurement automation workflow. The project connects the Service Catalog request, approval process, Flow Designer automation, Requested Item, and generated Catalog Task to reduce manual intervention and support timely laptop configuration.

Verification

The implementation should be checked in ServiceNow after configuration. The relevant configuration should be visible, the flow should be active where applicable, and the Standard Laptop request should produce the expected Catalog Task values. The final task should reflect the configured values and assignment.

Expected Result

The configuration contributes to a streamlined procurement process in which the Standard Laptop request can progress through approval and automated task creation, with the Hardware team receiving the configuration work.
